Virginia Natural Gas and the Communities We Serve

Our Economy – Fueling Our Local Economy in More Ways Than One

Virginia Natural Gas plays a critical role in our regional economy and is an active participant in the economic development of our service area. In Virginia, the industrial sector is the second-largest natural gas-consuming segment behind electric power generation. Manufacturing companies, ship building and repair industries, port-related industries and the military utilize natural gas for reliability and their energy needs. Virginia Natural Gas proudly serves more than a dozen military installations throughout Hampton Roads.

Our Environment – Taking Action Toward a Sustainable Future

At Virginia Natural Gas, we pursue our climate and stewardship goals not just because they are good for the customers and communities we serve, but because we're improving the quality of life for generations to come. With its domestic abundance, affordability and low emissions profile, America's energy future includes a significant role for natural gas. Natural gas's reliability and resiliency also make it critical to America's energy mix. As we look to the future of the citizens and businesses served by Virginia Natural Gas in southeast Virginia, natural gas will work in partnership with renewable energy sources, providing a solid foundation for bringing more renewables online.

Virginia Natural Gas is a **leader in the country** in the use of responsibly sourced natural gas. **We are now supplying 100% of our residential and small business customers with certified Next Generation Natural Gas.** In addition, we have launched a Sustainable Gas Program, which includes a five-year pilot to encourage the development of renewable natural gas (RNG) production facilities within the Virginia Natural Gas service territory.

VNG has partnered with the Hampton Roads Sanitation District (HRSD) on a Renewable Natural Gas (RNG) Project that will convert biogas from the Atlantic Treatment Plant into RNG, providing a sustainable energy source and reducing greenhouse gas emissions at this facility. This project is anticipated to provide enough heat to power 3,000 homes for a year.

Safety and Reliability – Steps to Advance Virginia's Energy (SAVE)

SAVE, our pipeline modernization program, allows us to upgrade our pipelines and aging infrastructure to enhance the safety and reliability of our system for years to come. Since we began our SAVE efforts in 2012, **we have retired more than 575+ miles of aging pipeline.**

In 2024, Virginia Natural Gas received approval from the Virginia State Corporation Commission for Phase 4 of this program, which will allow us to continue our efforts through 2029, investing another **\$355M in renewing aging infrastructure. Nearly \$74M was spent on SAVE projects in 2024 alone.**

An additional **\$25.5 million is also allocated across the next five years for the implementation of a new Advanced Leak Detection and Repair program**, deploying cutting-edge technologies to identify and address leaks more efficiently.

Energy Savings for Customers

The Virginia Natural Gas Energy Efficiency Program is designed to help customers take control of their energy use at home. This free program provides education, tools, resources and financial rebates to make energy use in the home more efficient and affordable. This program features:

- Money-saving rebates on the installation of new qualifying natural gas equipment, like high efficiency furnaces, tank-style and tankless water heaters and SMART thermostats.
- A free online home energy audit complete with a comprehensive report and personalized recommendations for saving energy in their home.
- Option to choose one of three free energy-savings kits filled with easy-to-install items to help make their home more energy efficient.
- Home energy reports that encourage behavioral changes to help customers conserve energy use.

For additional details about the program, visit virginiannaturalgas.com/energyefficiency.
