

Pipeline Enhancement Project

Shore Drive Relocation Project

Virginia Natural Gas provides safe and reliable natural gas services to more than 300,000 customers across southeastern Virginia. To ensure the safety and reliability of our distribution system, we are investing in some important infrastructure improvements.

This project is for the relocation of our gas facilities in order to make room for the City of Virginia Beach’s upcoming utility improvements. VNG will also make necessary enhancements to our natural gas pipeline system to ensure our customers have safe and reliable natural gas when they need it and for generations to come.

As with any infrastructure project, there may be temporary inconveniences while work is underway. This project will be coordinated with local officials and will use traffic control measures that meet Virginia Department of Transportation standards. We take great care in implementing the safest and best construction practices to protect your property during construction and will make every effort to restore it to its original condition.

Our commitment

We understand your time is valuable, so we take great care in implementing construction practices that limit disturbances to homeowners and businesses. We appreciate your patience and understanding as we work to complete this important work.

City affected - Virginia Beach
